

watsonkawkaw2 Website Setup Guide

Simple steps to download the project, open it in VS Code, and run the website locally.

Quick note: You do not need an API key just to open and view the website. The AI image analysis button needs an API key.

What Is An API Key? / 什么是 API Key?

English: An API key is like a private password that lets this website use an online AI service. In this project, the API key allows the website to send a rooftop image to OpenAI for AI analysis.

中文: API key 就像一个私人的密码或通行证，让这个网站可以使用网上的 AI 服务。在这个 project 里面，API key 是用来把 rooftop 图片送去 OpenAI 做 AI 分析。

Important: Do not share private API keys publicly. Other people may use your account quota or money.

重要: 不要随便分享自己的 API key。别人拿到后可能会用到你的 account quota 或费用。

For viewing only: No API key is needed. You can still open the website and see the design.

只是看网站: 不需要 API key。你还是可以打开网站看 layout 和 UI。

Before You Start

1. Install Visual Studio Code: <https://code.visualstudio.com/>
2. Install Node.js LTS: <https://nodejs.org/>
3. If Node.js was just installed, close and reopen VS Code.

How To Open The Website

1. Open this GitHub link:
<https://github.com/khoojunxi/watsonkawkaw-2>
2. Click the green **Code** button.
3. Click **Download ZIP**.
4. Extract / unzip the downloaded file.
5. Open VS Code.
6. Click **File > Open Folder**.
7. Choose the extracted folder. Usually it is called `watsonkawkaw-2-main`.
8. In VS Code, click **Terminal > New Terminal**.
9. Run this command and wait until it finishes:

```
npm install
```

10. Then run this command:

```
npm run dev
```

11. Open this link in Chrome:

```
http://localhost:3000
```

If Something Goes Wrong

`npm` is not recognized

Install Node.js LTS, then restart VS Code and try again.

Port 3000 is already used

The terminal may show another link like `localhost:3001`. Open that link instead.

Wrong folder opened

Make sure VS Code shows `package.json` in the file list.

AI button does not work

This is normal without an API key. The website UI can still be viewed.

Short message:

Download the project from GitHub, open the folder in VS Code, run `npm install`, then `npm run dev`, and open `http://localhost:3000`. No API key is needed just to view the website.
